eduardionescu26@gmail.com

Portfolio — *GitHub*

Self-taught developer with experience building intuitive, user-friendly websites. Enjoys collaborating with designers and developers to bring ideas to life. Full stack developer specializing in frontend.

Experience

DeepSign GmbH/ Full Stack Developer

March 2023 - July 2024

- Built a frontend for an internal client dashboard, integrating it with backend APIs in collaboration with backend developers.
- Developed the main company website, implementing an authentication system, database, and a client dashboard.
- Created surveys and game-like applications to gather user data, resulting in a 4 times decrease in AI model inaccuracy.
- Researched and integrated scalable libraries and technologies, achieving an 84% reduction in costs.

Projects

AnimeSun — *GitHub* *Live*

January 2022 - January 2023

Grew tired of the complexity and unnecessary features of MyAnimeList so I made AnimeSun

- Developed an anime database website that retrieves data from multiple APIs for comprehensive title information.
- Initially used JikanAPI, overcoming search limitations by integrating another API for enhanced functionality.

FitByte — *GitHub* *Live*

April 2024 - October 2024

The existing workout apps didn't meet my needs and I also wanted to own my data so I made FitByte.

- Implemented interactive graphs to visualize workout progress and statistics.
- Tracks workouts including RPE and video links for form checks.

Education

Self-taught Developer

January 2020- March 2023, Germany

Focused on frontend and fullstack technologies with freeCodeCamp.org, react.dev/learn, nextjs.org/learn and leetcode.
